

Batch Evaluation

The image shows a VS Code editor with a file explorer on the left and a terminal at the bottom. The file explorer shows a project structure for 'TESTLEAF-LLM-EVALUATION-METRICS-DEEPEVAL'. The terminal window shows the command 'npm run dev' being executed, which starts the development server. The output shows the server is running on http://localhost:5174/.

```
1 # LLM Evaluation Framework (DeepEval)
2
3 A three-tier application for evaluating LLM/RAG outputs using [DeepEval](https://github.com/
4 confident-ai/deepeval) metrics, with a React UI for single and batch (Excel-driven) evaluations,
5 an Express API gateway, and a Python/FastAPI sidecar that runs the actual DeepEval metrics
6 against Groq or OpenAI models.
7
8 Frontend (React + Vite) → Backend (Express + TS) → DeepEval Service (FastAPI + Python) →
9 Groq / OpenAI
10 | | :5174 :5174 (see Ports) :8000
11
12 For a deep, line-by-line trace of a single request, see [ARCHITECTURE.md](ARCHITECTURE.md). This
13 README focuses on setup, the API surface, and the DeepEval metric implementations.
```

```
PS D:\genai-assignments\phase2\Week12\testleaf-llm-evaluation-metrics-deepeval> npm run dev
l\frontend>
`optimizeDeps.rollupOptions` / `ssr.optimizeDeps.rollupOptions` is deprecated. Use `optimizeDeps.rolldownOptions` inst
ead. Note that this option may be set by a plugin. Set VITE_DEPRECATION_TRACE=1 to see where it is called.
[vite:react-babel] We recommend switching to `@vitejs/plugin-react-oxc` for improved performance. More information at
https://vite.dev/rolldown

Started both Front end and back end servers and the app is up now

Single Evaluation - Faithfulness

Required parameter: input, actual_output, retrieval_context

Testleaf Evaluation Suite

Single EvaluationBatch EvaluationMulti-Turn EvaluationGolden DatasetCustom Metrics (G-Eval)

Query/User Input *

As a registered user, I want to reset my password via email so that I can regain account access if I forget it

LLM Output/Actual Output From LLM *

TC1: Verify reset link is sent to the registered email.
TC2: Verify reset link expires after 30 minutes.
TC3: Verify new password must meet complexity rules (8+ chars, uppercase, number, special character).
TC4: Verify request is blocked for 15 minutes after 3 failed attempts within an hour.

Retrieval From RAG Or From Document *

Reset link is sent to the registered email and expires after 30 minutes

New password must meet complexity rules: min 8 characters, 1 uppercase, 1 number, 1 special character

After 3 failed reset attempts within an hour, the reset request is temporarily blocked for 15 minutes

+ Add Context

Click for Evaluation

METRIC

FAITHFULNESS

SCORE

1.0000

VERDICT

FAITHFUL

EXPLANATION

The score is 1.00 because there are no contradictions, meaning the actual output is perfectly faithful to the retrieval context!

CLAIM-LEVEL BREAKDOWN (4 CLAIMS)

4 supported

0 contradicted

0 ambiguous

CLAIM	VERDICT	REASON
A reset link is sent to the registered email.	YES	—
A reset link expires after 30 minutes.	YES	—
A new password must meet complexity rules consisting of 8+ characters, uppercase, number, and special character.	YES	—
A request is blocked for 15 minutes after 3 failed attempts within an hour.	YES	—

EVALUATION INPUT

Query:
As a registered user, I want to reset my password via email so that I can regain account access if I forget it

Logs in python server

The screenshot shows a VS Code editor with the file explorer on the left displaying the project structure for 'TESTLEAF-LLM-EVALUATION-METRICS-DEEPEVAL'. The main editor window shows the 'deepeval_server.py' file with the following code:

```
llm-eval-providers > deepeval_server.py > evaluate_llm_response
1508 def init_evaluator_from_env() -> MetricEvaluator:
1570     """
1571     """
1572     """
1573     """
1574 @app.post("/eval", response_model=EvalResponse)
1575 async def evaluate_llm_response(req: EvalRequest):
1576     """
1577     Evaluate an LLM response using one or more metrics.
1578
1579     Supports:
1580     - Single metric: metric="faithfulness"
1581     - Multiple metrics: metric=["faithfulness", "answer_relevancy"]
1582     - All metrics: metric="all"
1583
1584     Each metric can be used independently to teach specific evaluation concepts.
```

The terminal output shows the following logs:

```
(.venv) PS D:\genai-assignments\phase2\Week12\testleaf-llm-evaluation-metrics-deepeval\testleaf-llm-evaluation-metrics-deepeval> python deepeval_server.py

The screenshot shows the 'Testleaf Evaluation Suite' web application interface. The top navigation bar includes buttons for 'Single Evaluation', 'Batch Evaluation', 'Multi-Turn Evaluation', 'Golden Dataset', and 'Custom Metrics'. The main content area is divided into several sections:

- Metrics ***: A row of checkboxes for selecting metrics. 'All' is selected, and 'Faithfulness' is also checked. Other options include 'Contextual precision', 'Contextual recall', 'Pii leakage', 'Bias', 'Hallucination', 'Ragas', and 'Answer relevancy'.
- Query/User Input ***: A text input field containing the query: 'As a shopper, I want to add items to my cart and complete checkout with saved payment methods so that I can complete purchases quickly'.
- LLM Output/Actual Output From LLM ***: A text input field containing the LLM output: 'TC1: Verify a registered user can select a saved payment method from the dropdown at checkout. TC2: Verify checkout requires the user to be logged in and blocks guest checkout. TC3: Verify order confirmation email arrives within 2 minutes of successful payment.'
- Retrieval From RAG Or From Document ***: A section with three text input fields for retrieval context: 'Guest checkout is allowed without creating an account', 'Saved payment methods can be selected from a dropdown during checkout for registered users', and 'Order confirmation email is sent within 2 minutes of successful payment'.

At the bottom, there is a green button labeled 'Add Context'.

Testleaf Evaluation Suite

Single Evaluation Batch Evaluation Multi-Turn Evaluation Golden Dataset Custom Metrics (G-Eval)

METRIC: FAITHFULNESS

SCORE: 0.6667

VERDICT: PARTIAL

EXPLANATION

The score is 0.67 because the actual output incorrectly claims that checkout requires a login and blocks guest checkout, directly contradicting the retrieval context which explicitly states that guest checkout is allowed without creating an account.

CLAIM-LEVEL BREAKDOWN (3 CLAIMS)

2 supported 1 contradicted 0 ambiguous

CLAIM	VERDICT	REASON
A registered user can select a saved payment method from the dropdown at checkout.	YES	—
Checkout requires the user to be logged in and blocks guest checkout.	NO	The retrieval context explicitly states that guest checkout is allowed without creating an account, which directly contradicts the claim that checkout requires login and blocks guest checkout.
An order confirmation email arrives within 2 minutes of successful payment.	YES	—

Batch Evaluation Report Summary

Generated: 1/8/2026, 1:08:11 pm

[illegible]

Row	Metric	Status	Score	Verdict	Explanation
1	faithfulness	Success	1.000	FAITHFUL	The score is 1.00 because there are no contradictions, indicating a perfect alignment between the ac
2	answer relevancy	Success	1.000	RELEVANT	The score is 1.00 because the provided output is perfectly relevant to the input question about Appi
3	contextual precision	Success	1.000	HIGH_PRECISI	The score is 1.00 because the retrieval contexts contain a single node, which is a node in the retri
4	contextual recall	Success	1.000	HIGH_RECALL	The score is 1.00 because the entire expected output can be perfectly attributed to the 1st node in
5	pii leakage	Success	0.000	HIGH_LEAKAG	Score is 0.00 because 2 of 2 identified PII item(s) were confirmed leaked: Contains account number w
6	bias	Success	0.000	UNBIASED	The score is 0.00 because the actual output demonstrates exceptional neutrality, as evidenced by the
7	hallucination	Success	1.000	HALLUCINATE	The score is 1.00 because the actual output directly contradicts the provided context regarding plat

Score Distribution Analysis
